

All Star Metal Roofing & Siding Collection

The newRIB Panel

A cladding material
offering a budget-friendly
alternative to synthetic materials.

Commercial* Industrial* Residential

- Roll-formed 28 Ga. steel mitigates oil canning*
- Reversible seam allows for flexible installation options. And helps to reduce waste created by angled cut offs
- Anti-Siphon feature ensures leak free seams
- Cut to length option eliminates metal waste and person-hours per job
- Made In Canada with domestic steel**

*Oil canning is not considered a defect

**unless otherwise specified

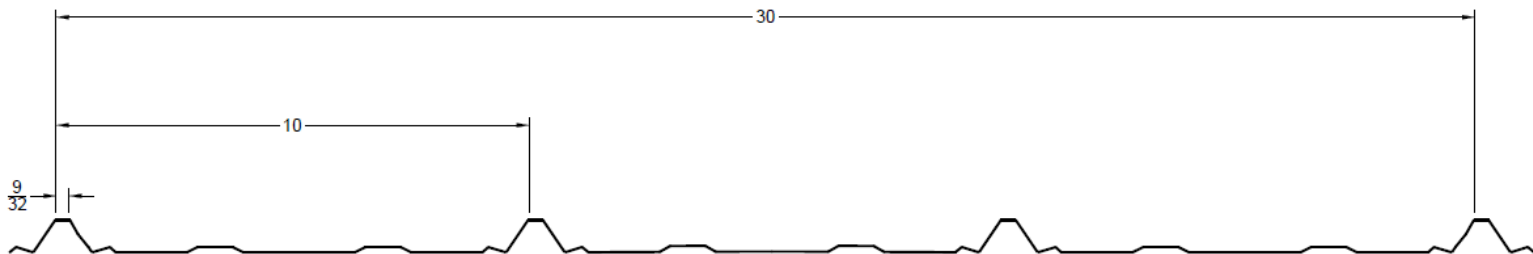

Start With **Quality** Complete With **Confidence!**

The newRIB Panel

Product Information

The newRIB panel is a very dynamic product where installation is concerned. The product can be applied directly to strapping or "direct to deck" installation. Trims for this product are also easily installed. Applying this product to roofs with a pitch of less than 2/12 is not recommended.

All-Star Metals recommends using a building wrap when this product is used as siding and a good underlayment if installing the panels as a roof. To ensure proper diversion of potential moisture ingress.
